

Muhammad Rifqi Imam Saputra

+6282123073107 - muhammadrifqi.tb@gmail.com - <https://github.com/rifqicode>

Backend Engineer with 7+ years of experience designing and delivering scalable backend systems in production environments. Strong background in distributed systems, microservices architecture, and third-party integrations across fintech and enterprise domains. Trusted to independently own complex tasks end-to-end taking problems from requirement to production with a focus on reliability, data integrity, and long-term maintainability. Primarily specialized in JavaScript and, with additional experience in Go for several components. Deep hands-on expertise in PostgreSQL, MongoDB, and Redis, building event-driven and data-intensive systems that scale with both traffic and business complexity.

WORK EXPERIENCE

PT AKSI VISITAMA (TADA) - Backend Developer

Sep 2021 - Present

- Independently led a full authentication service rewrite in 1 month – migrating from an end-of-life Node.js v10 stack to Go with full backward compatibility, unblocking new feature development and improving overall security.
- Implemented WhatsApp-based authentication to reduce OTP costs and improve login efficiency
- Co-designed and delivered a configurable rule-based fraud detection engine with the tech lead in under 2 weeks replacing a rigid legacy system with an operator-controlled platform where teams can define per-transaction thresholds, auto-lock rules, and rejection policies without engineering involvement, directly reducing the company's financial loss exposure
- Independently handled 7+ vendor integrations end-to-end from API discovery to production deployment across logistics (GoSend, Lalamove, SiCepat, Shipper), fulfillment (RajaBiller, Tokopedia), whatsapp template creation (vFirst) and internal tooling (Lark) . eliminating manual ops processes and expanding the platform's product catalog.
- Architected a real-time data aggregation pipeline using Debezium and Kafka to synchronize data across multiple microservices into a single source of truth, significantly improving reporting accuracy and system-wide data consistency.
- Integrated Claude Code into daily workflows, accelerating feature delivery and reducing debugging time

PT. Bonatifek Anjar Patria - Web Developer

Mar 2019 - Apr 2021

- Delivered 2+ projects for government clients, translating manual business flows into digital systems including official correspondence management and operational workflow automation.
- Built monitoring dashboards for government clients including budget absorption tracking for a ministry financial bureau, enabling data-driven decision making on budget realization targets.
- Designed and implemented relational database architecture to support complex reporting requirements in enterprise government environments.
- Developed a mission-critical application for the Ministry of Tourism to manage Regional Allocation Funds (DAK), enabling regional entities across Indonesia to submit and review budget plans.

EDUCATION

Universitas Bina Nusantara (BINUS) — Bachelor's, Information Systems 2024 – Present

SMK Taruna Bhakti Depok — Software Engineering 2015 – 2018

TECHNICAL SKILLS

- Programming Languages: JavaScript, Go, PHP, SQL
- Frameworks & Libraries: Gin, ExpressJS, Laravel, Symfony, ReactJS, NextJS, Angular
- Databases & Storage: PostgreSQL, MongoDB, Redis, MySQL, Elasticsearch
- Messaging & Streaming: Kafka, NSQ, Debezium
- Cloud & DevOps : Docker, Linux, AWS (S3, EC2, Lambda)
- AI Tools : ChatGPT, GitHub Copilot, Claude, Claude Code, Cursor, Gemini
- Others : Grafana
